Summary

I need to build a multi-vendor digital products Marketplace similar to freepik.com and shutterstock.com I got a ready PHP Laravel script from code canyon that got 65% of the job done:

https://codecanyon.net/item/fickrr-multi-vendor-digital-products-marketplace/29786224

Demo:

Frontend: https://demochecks.com/demo/fickrr

Admin: https://demochecks.com/demo/fickrr/login

Username: admin   **Password:** admin

Vendor : https://demochecks.com/demo/fickrr/login

Username: vendor   **Password:** 123456

Customer : https://demochecks.com/demo/fickrr/login

Username: customer   **Password:** 123456

Online Documentation: https://codecanor.com/docs/fickrr/documentation

Laravel Version: Laravel 8.37

Technical requirements

I need to **add** the following to the script:

- Add a help page that contains some videos and articles on how to use the website
- Add some space (boxes) for advertising
- Add a chatting feature between the visitor and the vendor
- Add the mobile number field in the sign-up process (He will sign up using his phone number, email address, and password). No need for SMS verification, we will need his phone number to stop the users from creating multiple accounts (Users can't create 2 accounts using the same phone number).
- Add a lot of filters to the search bar like the filters in freepik.com
- Add collections to group the files like here https://www.freepik.com/collections

- Block the user from editing his mobile number after signing up.
- All accounts should be logged out automatically every 2 days
- Add a box field for the **vendor**'s profile to write a brief about himself and his work experience, also will need to add a field for him to add his Behance URL.
- Add some tags while uploading every picture, the **vendor** should find some fixed options (tags) to choose for each photo he uploads (Ex. Nature, fitness, business, gaming,…)
- Add a fixed profit amount per download on any of the **Vendor**'s images.
- Sign Up on / off for the vendors – a manual system to accept the vendor's sign-up request from the **Admin Panel**. After signing up, the site will show the vendor that his request to create a vendor account is under processing and being revised by the site admins.
- Add level system to each contributor and upgrade them manually from the **Admin Panel** (Ex. Upgrade a contributor to level 2 for uploading 1000 high quality digital products)
- Add some reasons in the **contact form of the vendor's profile** and ask him why is he contacting us (Request a level upgrade, complaint)
- Limit the number of uploaded files for each contributor. Ex. Level 1 will only be able to upload 20 files and in order to upload more files he will need to be promoted to level 2 from the admin panel manually.
- Add an option in the admin panel to review any uploaded file by the vendors before publishing it and give options to the admin to choose a reason for the rejection of the files.
- Add a comment filed in the vendor's signup process asking about his experience and his Portfolio link.
- Add a file attachment in the vendor's signup process asking him to attach his ID / or Passport / or driving license.
- When a contributor gets a promotion from level 1 to level 2, he will earn more money per download.
- The price per download varies depending on the type of the user's subscription. Ex. If the user downloaded a free file the contributor will get 0.5EGP, and if he downloaded a premium, the contributor gets 1EGP.
- The price per download varies depending on the type of the photo. Ex. If the user downloaded a mobile photography the contributor will get 0.2EGP, and if he downloaded a camera photography, the contributor gets 0.5EGP.
- When uploading a picture, the contributor needs to choose whether it's a mobile photography or Camera Photography.

I need to **edit** the following features:

- Block the customer from downloading any digital product before signing up (He has to sign up first to be able to download anything from the website)

- Limit the number of free downloads for the customer (Ex. Maximum 50 downloads per free user, then he will have to subscribe to a membership to access more number of downloads)

- In the vendor's profile edit the "verified" box to be only a ✅

- Compress files automatically when uploading and accept to upload all file types not only zip files.

Upload Files

Upload Thumbnail * (Size : 80x80px)

| Choose files To Upload | Choose Files |

Upload Preview * (Size : 361x230px)

| Choose files To Upload | Choose Files |

Upload Main File Type *

| ⌄ |

Upload Main File * (ZIP – All files)

| Choose files To Upload | Choose Files |

Main File Link/URL *

| |

Upload Screenshots (multiple) (Size : 750x430px)

| Choose files To Upload | Choose Files |

I need to **remove** the following from the script:

- Remove these files categories from the website: Scripts, themes, Plugins, and all other categories, we will only need the following categories: Vectors, Photos, PSD, Icons exactly like in freepik.com.
- Remove the Cart system and keep the **subscription model only** like Freepik
- Remove the Flash Sale items section because we don't need a price for each item anymore, we need a **subscription model only**.
- Remove the Review and Ratings option for items
- Remove the Rating notification email
- Remove the "Coupon codes" section from the **vendor**'s dashboard.
- Remove the description section in the vendor's panel (temporarily cause we may need it later on) https://demo1.minaadel.com/edit-item/O46UFkMbSeDuzZdOstVr5PvZo

- Remove the "Price per product" part and remove the discount and sale option from the **vendor**'s dashboard
- In the "Sales Section" of the **Vendor**'s dashboard, Remove the "Total Sales" and the "Total Purchases" and replace it with "Total Downloads"

- Remove the "Customer Reviews section" from the **Vendor**'s dashboard.

- Remove the Rating and reviews section from the **Admin Panel**.
